THE FIRM OF W. W. GREENER.

W. GREENER, 1829—1869.

W. W. GREENER, 1861—1887.

W. W. GREENER, retired 1911. | H. GREENER, | C. E. GREENER, 1887 to 1911.

H. GREENER, C. E. GREENER, 1911 to 1920.

PRIVATE LIMITED COMPANY—FEBRUARY, 1920.

Directors: H. & C. E. GREENER. *Secretary*: C. H. L. GREENER.

The Firm was established in Newcastle, in 1829, by the late W. Greener, who moved to Birmingham in 1844, and carried on an extensive trade at Rifle Hill. After his death, in 1869, the business was transferred to its present site in St. Mary's Square, and continued to grow in size and importance. Now its manufactures are famous throughout the world, and to meet the ever-increasing demand, the factory has been extended until it fronts St. Mary's Row, Loveday Street and Bath Street, and is to-day the most complete Sporting Gun Factory in the world. Within its area of 37,000 square feet, gun-making in all its branches may be inspected; there also the largest stock in Great Britain of fine and medium-priced guns and rifles suitable for Home and Colonial use may be seen.

In 1920 the Firm was formed into a private Limited Company. No outside capital or influence has been introduced, and the business is still carried on under the direct supervision of the Greener family, so that the requirements of sportsmen will now, AS ALWAYS, receive the personal attention of a member of the Firm.

Members of the Greener Firm having had wide experience of shooting in nearly every clime are in a position to effectually equip expeditions with tents, food, instruments and all necessaries not described in this list. Their experience is at the service of all sportsmen. Quotations will be gladly supplied.

The Directors are in touch with the leading Sporting Dog Kennels, and constantly ship dogs for sport or breeding to their customers abroad.

GREENER GUNS have been awarded the highest order of merit at International Exhibitions since the first in 1851. They have won at all the great Gun Trials at London and abroad. They have gained the most sought prizes at the Trap in every country, and have been and are used by the finest sportsmen and best shots in the world. Shoot a GREENER GUN and join their ranks.

Head Office and Works: St. Mary's Row, Birmingham.

IN presenting this new catalogue of Shot Guns and Accessories, we recognise that it is impossible to cover the wide sphere of "Sport with the Shot Gun," no matter how comprehensive such a list may be, and we take this opportunity of soliciting correspondence on any subject relating to the art of shooting with the gun or rifle.

We shall appreciate an opportunity of supplying any further information or discussing shooting problems with sportsmen. **Letters should be addressed to the Registered offices of the Company,** St. Mary's Row, Birmingham, England, where also all correspondence from abroad should be sent.

We are determined that GREENER GUNS shall maintain the high reputation achieved during the past century of gun-making, and we feel sure that sportsmen will be delighted with our latest productions.

The New Models illustrated in this list represent the latest development of the modern Sporting Gun—an effort has been made to meet the requirements of all sportsmen, and in appearance, design and workmanship they are a great advance upon any previous production, and we can confidently assert that they present the finest value ever offered in GREENER GUNS.

We take this opportunity of stating that GREENER GUNS are sold everywhere and to everybody at the prices in this list, with the necessary addition for delivery to any part of the world. They are also sold strictly on their merits. Every gun has its respective grade number engraved on it; and as the prices are calculated to give the utmost value to the user, no secret commission or reduction can be, or is ever, offered or granted by the firm for the introduction of customers. Further, no person is, or ever has been, paid by us to use or shoot a "GREENER" GUN, whether for pigeon shooting or otherwise.

It has been our constant study to meet the requirements of sportsmen by promptly and accurately carrying out their instructions. The indications and hints received from our sporting friends from time to time have enabled us to improve both Shot Guns and Rifles in many particulars, and we hope to be favoured with their co-operation in this important work in the future as in the past.

W. W. GREENER, LTD.

Birmingham.

Catalogue No. 51. Cancels all previous price lists.

NOTES.

THE "GREENER" EJECTORS.—A New Model Ejector Gun with the ejecting locks in the fore-end has been produced to meet the requirements of those sportsmen who prefer the fore-end ejector, and it can be recommended as being, from its comparative simplicity, among the best of its class (see Grades FH). The W. W. Greener Patent Ejector (applied to "Best" Grades and to Presentation guns) has been still further improved, and is offered with confidence as possessing the simplest and most efficacious mechanism ever designed for throwing out fired cartridges. Experience has proved that the safest and most reliable mechanism is that which is the simplest of construction; and for simplicity and soundness, the "Unique Ejector" is easily first.

WROUGHT-STEEL BARRELS.—"Greener's Wrought-Steel Barrels," recommended in this list, are made of a homogeneous metal of a very fine quality, and admirably adapted by its great toughness and tensile strength for use in gun barrels. W. W. Greener, Ltd., recommend this metal to their customers as being one in which they have every confidence, and which has been chosen only after 12 years of research and numerous trials. Wrought-steel barrels have been thoroughly tested by W. W. Greener, as well as the Government Proof House, with very heavy charges—28 drams of powder and $4\frac{1}{2}$ oz. of shot—without a burst. This is equal to nine ordinary charges of powder and four ordinary charges of shot. Experiments have been made with rustless steel for barrels; and while a certain amount of success has been attained with rifle barrels, our own experience with this metal for gun barrels has not proved very satisfactory. Trials are still under way, but sportsmen should be warned that too much must not be expected in this direction. It is obvious that any steel which has to be browned externally by a corrosive process cannot be absolutely rustless; in fact, the term is comparative only, and the amalgamation of the alloys is not yet perfected.

BARREL BORING.—A gun more or less choked is now invariably used. It is wrong to call a modern game gun a "cylinder," for no cylinder barrel can make an average pattern of even 130, under standard conditions. The usual "cylinder" is really choked about $\frac{10}{1000}$ of an inch.

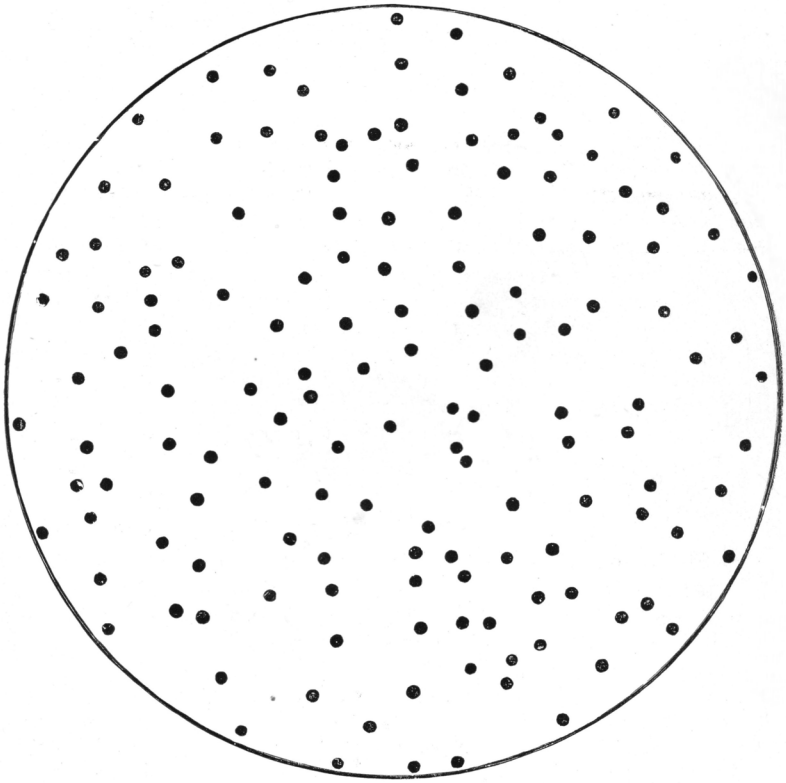
We recommend a full choke for most purposes in the hands of a good shot in whose hands there can be no doubt that it is the most effective weapon. For shooting at close quarters, however, one barrel should be modified to an improved cylinder, and this will also prove the best for those sportsmen who have the disadvantage of short sight. The technical mode of expressing the shooting of a gun is to give the number of pellets required in a 30in. circle, with a Greener Standard Charge, $1\frac{1}{8}$ oz. of No. 6 shot (270 to the oz.) at 40 yards. No further particulars are necessary.

For driven game only, that is, where the game is brought over, many shooters prefer both the gun's barrels to be bored to give a wide pattern of the improved cylinder type.

SHOOTING.—Shooting patterns are often stated in terms of percentages, especially in the United States of America, but these are misleading, as they only refer to some special load. There is no gun which will excel the Greener choke bore in levelling up the average performance of various loads of cartridges, also there are no two cartridges performing exactly alike.

Eighty per cent. patterns are very good, and only obtained when powder, shot and loading are regular and velocities are normal. Usually patterns reaching these high percentages are obtained with larger size shot than the standard English No. 6 (270 to the oz.)

All guns are shot twice before they leave the works—in the rough and again when finished. Gentlemen can see their guns tried at the range in the works at Birmingham. The barrels can also be regulated or improved to their fancy, and again shot during one visit only.



FAC-SIMILE OF A GOOD IMPROVED CYLINDER PATTERN.

PATTERN.—The Standard Patterns from Cylinders and Chokes are as follows :

With a 12-bore gun, standard load (black powder and 1⅛ oz. No. 6 shot, 305 pellets to the charge), distance and conditions, the following are the average patterns :

Full-choke	215 pellets.	Improved cylinder (the usual boring for driven game) ...	140 pellets.
Half-choke	185 ,,		
Quarter-choke ...	160 ,,	Old, or true cylinder ...	115 ,,

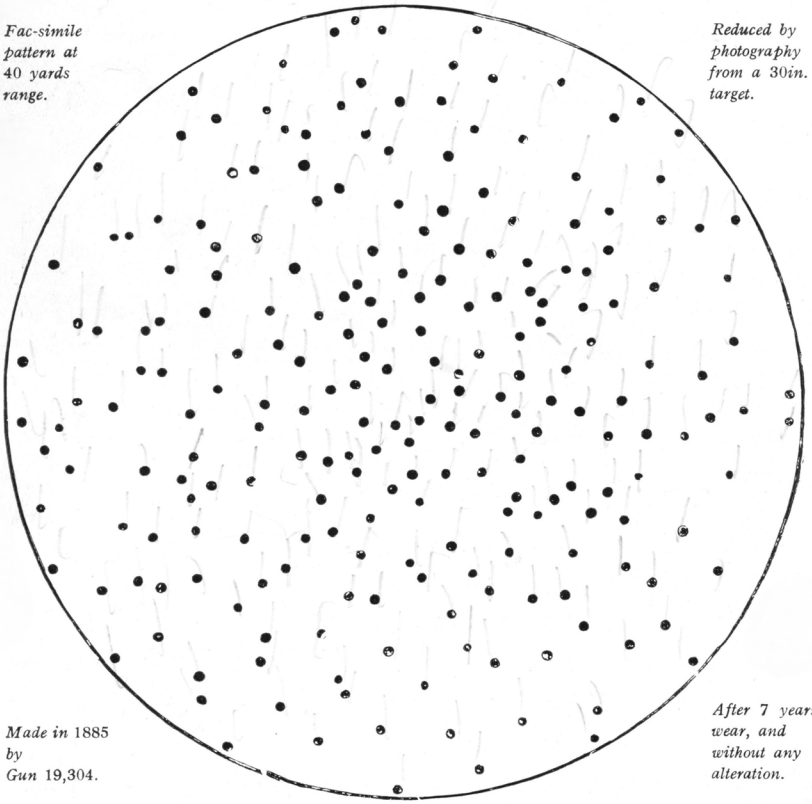
Better shooting than an average of 215 can be obtained from an extra full-choke bored 12-bore gun by using Greener's selected nitro-powder cartridges. $1\frac{1}{4}$ oz. of shot improves the pattern of choke guns from 10 to 30 pellets when using No. 6 shot; it fills up the pattern just round the 30in. circle.

No increase in the charge of shot will improve a cylinder.

THE CHOKE-BORE.—The Choke-bore was introduced by W. W. Greener in 1874, and immediately achieved the most decided success, beating 33 competitors and 68 guns by all the best London and provincial makers for 8, 10, 12 and 20-bore guns, in the celebrated "Field Gun Trials" of 1874. The long-continued "Wear and Tear" Trial of 1875 proved its lasting power, which has since been many times corroborated.

Fac-simile pattern at 40 yards range.

Reduced by photography from a 30in. target.



Made in 1885 *by Gun* 19,304.

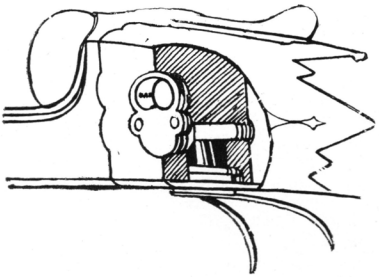
After 7 years' wear, and without any alteration.

THE FINEST SHOOTING ON RECORD.

The Choke-bore has an increased velocity over the cylinder; its penetration is greater, and the killing range is extended considerably; with large shot it is possible to kill game and wild-fowl at distances extending to 75 yards; and with larger bores, even to 130 yards.

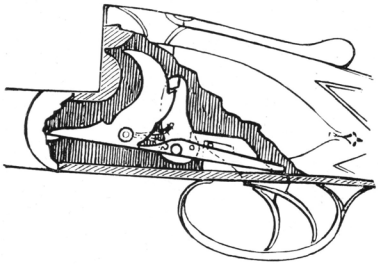
A RECORD.—Possibly the best proof is afforded by the gun No. 19,304, supplied by W. W. Greener, in 1878, to the Schultze Gunpowder Co., and used by them almost daily in making factory trials of various powders. After seven years' wear (over 100,000 shots) this gun shot better than ever, and reproduced on page 4 is a *fac-simile* target, made and published by the Schultze Gunpowder Co., with particulars of the shooting. Besides retaining their shooting powers, W. W. Greener's Choke-bore Guns shoot regularly, and a series of 25, 50 or more shots—taken at any time—will exhibit none of those exceptionally close, patchy or low patterns invariably met with in badly bored guns.

TRIGGER SAFETY (INDEPENDENT).—It is usual to provide a bolt which locks the triggers so that they cannot be pulled. This should be independent, that is to say, it should not be so arranged as to automatically lock the triggers every time the gun is opened. Such an article lessens the advantages of a hammerless gun, and may become a nuisance. A side-safety, which bolts the trigger effectually, and which is easily put off and on with the thumb, is much better than an automatic safety on the top of the "grip" of the gun, and is always used on "Greener" Guns. If specially desired for pairs of guns, and where a loader is employed, they can easily be made automatic, and without extra charge. Top safeties all weaken the gun-stock, some very considerably, at its weakest point.



TUMBLER BOLTING SAFETY (AUTOMATIC).—Safety against a "jar off" in any type of gun is not an easy provision. The usual "Sear Safe" is no safe at all to a transverse jar. The safe that really ensures against jar in all directions has not yet been made, but it is possible to provide a safe for jar at right angles to the trigger bolting safe which is some further protection. We recommend sportsmen to trust rather to simple mechanisms, soundly constructed, than to complicate them by the addition of untrustworthy safeties, especially on guns of the lower qualities.

The trigger safety only bolts the triggers, and is no protection against a hammerless gun "jarring off." W. W. Greener's "Tumbler Catching" bolt has been designed to prevent the fall of the tumbler, should it be jarred out of bent by the dropping of the gun or other like causes. It acts automatically, and prevents accidents of this kind.



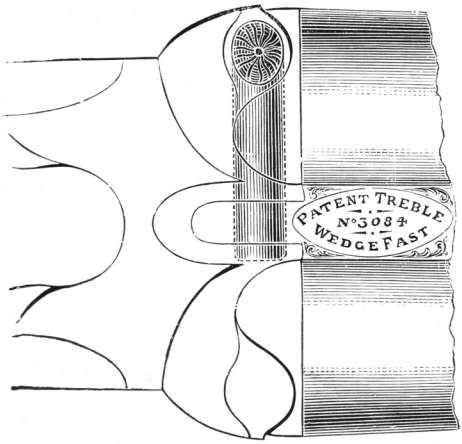
GREENER'S AUTOMATIC "BLOCK" SAFE.—The illustration makes clear its method of working. The safety catch blocks the path of the tumbler's fall until moved away by a projection of the trigger blade depressing its rear end when the trigger is pulled.

No system of tumbler bolting safety is effective in conjunction with single-trigger mechanisms.

PULL-OFF.—The usual pull-off for fine game and pigeon guns preferred by English sportsmen is 4 lbs. for the right and 4½ lbs. for the left lock. Light 20-bore guns will do about 1 lb. lighter, but for heavy duck guns and rifles the pulls must be heavier.

Some cannot use a gun which has a pull heavier than 3 lbs. for the first and 4 lbs. for the second barrel; the objection to such light pulls is that they are likely to jar off if the gun receives a slight blow, or sometimes even when closing the gun after loading, if this is done rather sharply.

CHOICE OF A GUN.—Whatever type of gun is bought—Ejector, Hammerless or simply "Hammer"—the system of breech fastening should be W. W. Greener's Top-lever Cross-bolt Action, which is undoubtedly the best and handiest. No system of breech mechanism is so popular; none so strong or so thorough; it will stand securely double the charge that can be fired from the shoulder. It has been tested in every way conceivable, and no fault or weakness has been found when applied to guns or rifles of every calibre and weight. Guns made with it have stood the final proof of continual use in every country and climate in the world, and have proved the most durable. The "Greener" Cross-bolt is universally acknowledged to be the strongest in the world, and guns made with the "Treble Wedge-fast Action" can be made lighter than with any other system of breech-fastening.



THE FIT OF THE GUN.—The fit of a gun is a truly personal matter, for although the majority of sportsmen can shoot well with the gun which suits eighty men out of every hundred, unless the gun is liked by them, they will never feel that they shoot so well with it as they should. As no two persons are alike, every person to be exactly suited with a gun will require something different to that which will suit another, but in practice the difference is often so slight as not to be noticeable.

W. W. Greener, Ltd., have a shooting ground within thirty minutes of 29, Pall Mall, London, where there are "clay pigeon" traps, etc., and every appliance for correct fitting and correction of shooting. At Birmingham, there is a range fifty yards long within the works, so that gentlemen visiting that city can see their guns plated without the inconvenience of a long drive to some special ground. As this range is in close proximity to the machine boring shop, gentlemen can have their guns tried, the shooting improved, and the guns again plated within the short time of one visit, if notice is given in advance. No charge is made for fitting the stock when a new gun is ordered. An interesting booklet, "Does Your Gun-stock Fit You?" will be sent post free on request, and by its aid we are enabled to supply sportsmen abroad with a comfortable fitting gun-stock.

ALIGNMENT.—Most men align with the right eye, that eye usually being the stronger. If the left eye is stronger than the right, the shooter must close his left eye when aiming, shoot from the left shoulder, or have his gun made so that it is alignable with the left eye. The gun-fitter's business is to discover and provide for such personal peculiarities; but a test for the stronger eye is to take a finger ring, and, holding it out at arm's length, look through it with both eyes open at some object twenty or more feet distant. Then close the left eye; if the right eye still sees the object through the ring (which must not be moved) the right eye is the stronger, and may be trusted to align the gun when keeping both eyes open when shooting.

When ordering by post, please use the Order Form at the end of this catalogue.

EXTRAS AND SPECIAL PRICES.

In this catalogue every article is priced separately, and there are no inclusive charges. Packing cases are charged, and carriage also when goods are sent carriage paid.

The prices for guns are for 12-bore only, unless specially stated; guns of larger bore than 12 are charged extra on all qualities (see pages 13 and 15).

No extra charge is made for pairs or sets of three guns; the price is the same as for two or three guns respectively.

Double guns with one trigger are built to order at 5 guineas extra on list prices not below 50 guineas, and 7 guineas extra on lower grades.

Barrels longer than 32in. are charged 15/- for every extra inch.

New or extra barrels usually cost half the original cost of the gun, but no barrels can be fitted for less than 10 guineas for Hammer guns, 12 guineas for Hammerless, and 20 guineas for Ejectors.

" Whitworth Fluid Compressed Steel " barrels are not fitted to Ejector guns under 50 guineas, or to Hammerless or Hammer guns under 30 guineas value. When fitted " Wrought-steel " does not add to the cost of the gun, but " Whitworth Steel " is always charged 10 guineas extra to the list prices.

A Top Safe on the hand of a Hammerless or Ejector gun costs 1 guinea extra.

Stocks specially fitted, as in guns to fire from the right shoulder when sighting with the left eye, add 5 guineas to the cost of the gun.

Ten-bores are not supplied in lower qualities than F35, and add 10 guineas to the list price of this, or superior grades ; eight-bores cost an additional 20 guineas ; Ejectors in either ten or eight-bores increase the cost a further 50 per cent.

REPAIRS.

It is quite impossible to state a definite price for alterations and repairs, but a special quotation will be given before commencing the work, when desired, and repairs are undertaken to any make of gun or rifle.

Alterations, except to the stock, are very costly and generally undesirable.

Repairs are always quoted nett and for cash.

All repairs are executed by skilled workmen, conversant with the mechanism of all kinds of guns and rifles. Sportsmen not living in the neighbourhood of London, should send their repairs direct to the factory at Birmingham, and should always quote the number of the gun in their letter.

GUNS WAREHOUSED.—We are prepared to store guns or rifles for sportsmen at an inclusive charge of 10/6 each per annum, which includes insurance against fire and burglary.

INFORMATION.

All genuine " Greener " Guns bear W. W. Greener's name and address *in full*, and are stamped with a number upon the breech end of the barrels, on the flats of the action and the fore-end.

For supplying details of any " Greener " Gun bearing a number higher than 22,860, the small sum of 2/6 is charged. Little or no information can be given about guns of a lower number.

The grade numbers, as in this catalogue, will be found engraved on the trigger guard ; otherwise the gun has not been made to a grade, but to a special price to order.

Patrons are requested to use the Printed Form at the end of this catalogue.

TERMS OF BUSINESS.

PAYMENT.—All prices in this list are net and for cash. Orders from abroad *must* be accompanied by a deposit of 25 per cent. of total value of the order, and balance paid against shipping documents at sight. A discount of 5 per cent. will be allowed on such deposit, or any sum paid in advance. Ten per cent. per annum interest will be charged on all accounts unpaid after first quarter day following delivery. All prices are in pounds (£) sterling, and payment must be made in England. On account of the unsettled rate of foreign exchange, prices can only be quoted in foreign currency subject to this understanding.

DELIVERY.—Owing to the difficulties of the labour market, W. W. Greener, Ltd., do not *guarantee* delivery to any specified date, and where promises are given it is understood that no further undertaking is implied than that their best efforts will be exerted to fulfil the promise made.

PACKING AND CARRIAGE.—Freight and all shipping charges are at the customer's expense, but W. W. Greener, Ltd., will make the necessary arrangement for prompt and economical shipment when the matter is left to their discretion. In the case of inland passenger train traffic, carriage has now to be paid in advance by sender; the amount will, therefore, be added to customer's invoice.

PARCEL POST.—Where possible, this is a rapid and economical method of forwarding a gun abroad. Guns may be sent by this means to most of the British Colonies, and an approximate list of rates is given hereunder. The limit of weight for one parcel is 11 lbs. This necessitates a heavy gun being packed in two parcels, adding slightly to the cost of packing and postage.

Country.	*Postage on one gun.*	*Packing.*	*Insurance.*
Australia	... 9/-	3/-	10/- per cent.
Canada	... 7/6	3/-	7/6 ,,
Jamaica	... 4/-	3/-	10/- ,,
New Zealand	... 6/-	3/-	10/- ,,
S. Africa	... 8/6	3/-	7/6 ,,
U.S.A.	... 7/6	3/-	5/6 ,,

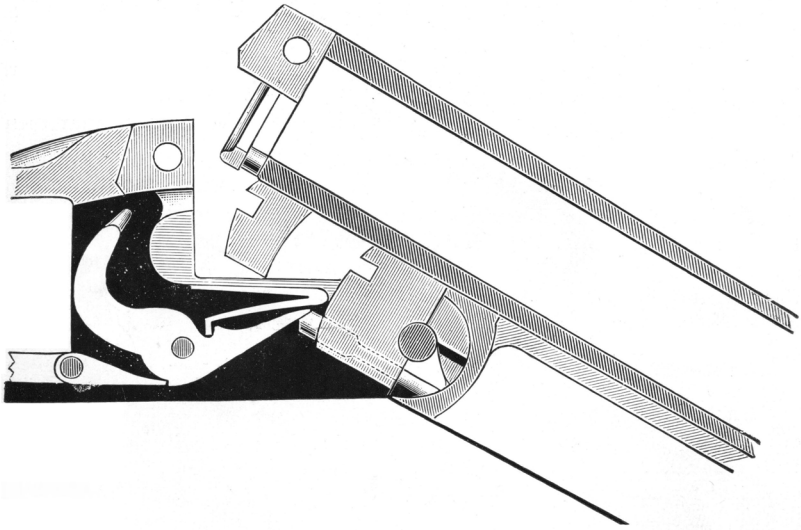
INSURANCE will be effected by W. W. Greener, Ltd., on all goods despatched abroad, unless instructed to the contrary, and the cost charged to the purchaser.

In the case of loss or damage, customers abroad should at once apply to the authorised underwriter at the port of entry for a Lloyd's Survey Certificate, which must be sent to W. W. Greener, Ltd., with particulars of claim.

Sportsmen can insure their guns against all risks of theft, fire, explosion or loss by any other cause, anywhere in Great Britain, at the following rates: up to £35 value, 7/6; £50, 10/-; £75, 12/6; £100, 15/- each per annum.

Greener "Facile Princeps" Action.

This mechanism was invented by W. W. Greener in 1880, and represents a considerable advance upon the then deservedly popular Anson & Deeley mechanism; and although it was claimed that it was an infringement of the latter patent, which led to considerable litigation, it was decisively decided in all Courts, culminating in the House of Lords, that the two systems were entirely different in principle.



"FACILE PRINCEPS" MECHANISM.

As will be seen from the illustration, the lock work is exceedingly simple, while the shape of the action is far more graceful than the ordinary A. & D. type.

There are no unsightly "dogs" or cocking lifters protruding from the knuckle of the action, and a strong screwed joint pin is substituted for the solid or knock-in joint pin.

The cocking is effected by a sliding rod working in the under lump, which engages on the turned-in extremity of the tumblers. Upon the barrels being dropped for loading, the cocking rod is raised with the lump, lifts the tumblers at the same time, and so affects the cocking. This type of mechanism is used on all Greener Guns of the F. and F.H. type, the latter having the addition of the Greener pattern Forend Ejecting mechanism.

W. W. Greener's Presentation Guns.

Chiselled and Gold Ornamented.

Prices by arrangement.

W. W. Greener will quote special prices for Ornamented Guns and Rifles for presentation.

The modern English-made gun, already a work of art and a masterpiece of clever mechanical design and workmanship, is also one of the most durable manufactured articles in the world, and, therefore, well adapted for expensive gold ornamentation. W. W. Greener's Ornamented Guns have achieved a splendid success, and wherever exhibited have been far ahead of all competitors, whether English or foreign. The designs and methods of combining the various decorations are unique, and have brought the art of gun-making to a distinctly higher stage. Specimens are now always kept for inspection, but such guns are never made to a model as regards ornamentation. They are not repetitions, and an effort is made to make each specimen a slight improvement over the one that preceded it. Designs are made to suit each order, and, when specified, to carry out individual ideas and requirements. In this country preference is not always given to heavy gold ornamentation, but it can be used to almost any extent, and naturally influences the cost of the work very much.

It is usual to let the " Greener " Unique Ejector—the highest development of the sporting gun—form the basis of the special treatment and decoration ; but any system, Hammer or Hammerless, can be ornamented, as required.

W. W. Greener's "Best" Grade Guns.

PRICE ... ... £131 5 0.

W. W. Greener has one price only for Standard " Best " Quality Guns, whether made with "Facile Princeps" type of action, Hammerless Ejector, Side Lock or with Hammers, viz., 125 guineas. Such guns can be further embellished with specially designed ornamentation for presentation without limit as to cost. The gun illustrated above is a typical specimen of such work. A brochure, describing " Fine Guns," will be sent free on request, and designs will be submitted for customer's approval.

W. W. Greener's Ejector Guns.

Grade FH70. **PRICE £73 10 0.**

DESCRIPTION.—This gun embodies all the world-famed Greener Gun features ; it is handsome in appearance, graceful in outline, perfect in balance.

The scalloped action, combined with the boldly carved fence, gives it a distinguished design unobtainable with any other type of action. The barrels, action and all metal parts are profusely and artistically engraved with scroll and flower bouquets, and the most fastidious sportsmen could with confidence express his pride in such a gun in any company.

ACTION.—Greener's "Facile Princeps," fitted with Greener Automatic Block Safety and Independent Side Safety, combined with the Greener Forend Ejecting mechanism.

BARRELS.—Greener's celebrated " Wrought-steel " is used for this grade of gun, and they can be bored to any degree of " choke."

This gun is practically a best gun at a much reduced price, and is the quality recommended where guns of exceptionally light weight, small calibre or extraordinary dimensions are required.

CALIBRE.—This grade can be supplied in any standard calibre from .410 to 12-bore at list price.

Killorglen, Ireland, 24/11/18.

" I cannot say how grateful I am to you for my lovely gun and for the great trouble you have gone to in carrying out even my smallest wishes. The gun shoots better and better every day I have it out."

Calgary, 31/7/24.

" I beg to say the gun ordered from you has come to hand safely and that I am very pleased with it. A very well-made and balanced weapon ; it seems a perfect fit and comes up very nicely. I should be able to give a good account of myself when the season opens."—P.B.

W. W. Greener's Ejector Guns.

Grade FH50. **PRICE £52 10 0.**

DESCRIPTION.—A new model Hammerless Ejector gun, specially designed for the sportsman requiring a well-finished weapon at a moderate price. This is not a cheap grade gun, elaborately engraved, but is well-made of superior material throughout, and is the general purpose gun of the average sportsman, suitable for all purposes in all climes, and is practically the " Standard " Greener Gun. The mechanism is identical with the Grade FH70. Greener Wrought-steel Barrels, Independent Side Safety, which can be made to work automatically if desired.

This grade can be supplied in any calibre from 12 to 28 at list price. Greener's Selective Single Trigger can be fitted at an additional cost of **£5 5 0.** Made in 10-bore at **90 guineas,** 8-bore at **£110 5 0.**

Wrexham, 28/4/24.

" I have a Greener Ejector. It is about the best gun for pattern and penetration I have ever had, and I have got a few here, from the bow and arrow to the Ejector."—C.W.

Santos, 22/3/24.

" I have pleasure in sending you my opinion on the 28-bore you sent me last year. On going out last week in the Organ Mountains, I tried the gun on small birds of the parrot tribe, about the size of a pigeon, and very difficult to kill—nearly all shot at mostly on high trees and sitting, shots which are always a good proof of penetration. What pleased me most, however, was one shot at a ' gneixadn,' or wild pig, at about 13 yards, with B.B.B. shot in the choke barrel. It dropped a yard after being hit, and died in less than one minute. My Brazilian companion was so delighted with the 28's performance, that I have had to hand it over to him for use in the 'matto' (brush)." —H.G.B.

W. W. Greener's Ejector Guns.

Grade FH35. **PRICE £36 15 0.**

DESCRIPTION.—This model has been specially produced to suit the needs of the majority of sportsmen abroad who require a strongly made gun capable of withstanding rougher usage than is customary at home, yet of such a weight that it can be carried and shot with comfort in warm climates.

The Greener " Facile Princeps " action has conclusively proved its superiority over all other systems for strength, combined with lightness, reliability and freedom from breakage, all points of vital importance to the sportsman ofttimes situated many miles from a reliable gunsmith. It is fitted with the "Greener" type of Fore-end Ejector mechanism, many thousands of which have been in world-wide use for over a quarter-of-a-century. The material throughout is of thoroughly reliable quality, and the gun is produced from the rough steel blanks and timber in the Greener factory. It is tastefully engraved, full value being put into the workmanship rather than decorative display, fitted with selected Walnut stock, Horn Heel Plate, " Greener " Side Safety, " Greener " Catch Fore-end.

Made to order in 12 and 16 bores only, with 28in. Steel Barrels, as light as 6¼ lbs. weight ; with 30in. barrels, 6½ to 7 lbs. ; either straight or pistol-hand stock.

The barrels are " choke-bored " to order, rib hollow, plain or engine-turned.

The illustration shows the gun fitted with single trigger, for which an extra charge of 7 guineas is made on this quality.

W. W. Greener's Hammerless Guns.

Grade F35. PRICE £36 15 0.

THE "FAR-KILLER" GUN.

DESCRIPTION.—As its name implies, the gun has been specially designed to fire heavy charges of both powder and shot with the maximum killing effect at long ranges. It is a Hammerless Non-ejector, fitted with the "Greener" Cross Bolt. The barrels are bored upon the "Field" Cup Winning System, with which "Greener" Guns beat all comers in the great London Trials of 1874, 1875, etc. Special attention is given to the shooting with large shot for ducks, geese and buck; and while we do not make the foolishly extravagant claims so frequently advertised by some makers, we confidently assert that this gun will consistently give the best results obtainable from any weapon of its class.

Built to order in 12-bore with 28in., 30in. or 32in. barrels, chambered for 2¾in. or 3in. brass or paper case, firing 52 grains of smokeless powder and 1½ oz. of shot No. 4 to S.S.G. Weights recommended for 12-bore, 7½ to 9 lbs.

This gun is made as an Ejector Gun at **£52 10 0.**

A "wild duck" in flight is engraved on the rib of all "Far-killer" Guns.

10-bore, price **£47 5 0**; 8-bore, price **£57 15 0.**

10-bore Ejector Gun, price **£70 17 6**; 8-bore Ejector Gun, price **£86 12 6.**

TESTIMONIAL.

EXTRACT FROM "THE FIELD" NEWSPAPER, AUGUST 6th, 1921.

LONG SHOTS WITH WILD-FOWL GUNS.

"Sir,—I use a Greener 12-bore; load 52 grs. Schultze, 1½ oz. shot. Sometimes, and if I want to make a particularly long, hard-hitting shot, I use 54 grs. Amberite and 1½ oz. shot.

"With the 54 grs. Amberite and 1½ oz. No. 6 shot, I can rely on killing a single teal sitting on the water at 75 yards, not with the pellet in the head, but with the bird full of pellets. I have made longer shots than this—at duck, swimming in 'line ahead' one after the other, and the nearest 80 yards away. I have killed four, five and six at a time, and picked up several wounded. At geese flying at a height of about 25 yards to 30 yards, and at least 50 yards, and sometimes 60 yards from me when I fire, I picked up most of them dead, with a charge of No. 1 shot. Duiker, Steinbok and Paauw, running and flying hard in a clean bit of veldt, I can, and do, kill at 75 yards with No. 1.

"I have in no way misjudged the distances. All that I have to do is to walk 100 yards down to the water and shoot duck, so that I have no difficulty in measuring. On Sunday last I shot my first Paauw for this season, distance 63 yards, No. 4 shot, dead as a door nail; weight 39 lbs., and in poor condition. The Paauw was standing still in the grass, and there was no shot in the head. This is the most difficult shot that I know of."

Mopepe, Bechuanaland Protectorate,
May 19th, 1921.

(Signed) G. C. INGLETON.

W. W. Greener's Hammerless Guns.

Grade F35. **PRICE £36 15 0.**

DESCRIPTION.—A high-grade Hammerless Non-ejector Gun, made upon the Greener "Facile Princeps" system of breech mechanism—the simplest, strongest and quickest firing extant. The gun is artistically engraved with game and scroll designs, beautifully finished, selected walnut stock. Made in light weights with 27in., 28in. or 30in. barrels for game shooting. Built to individual requirements

Made in all calibres from 12 to 28. (See table of weights, etc., on page 29).

Christchurch, 25/8/22.

"The N.Z. Gun Club's Live Pigeon Championship went to a Greener gun; 51 shooters, 21 birds, 28 yards rise. Two men killed their 21 and shot off, Truscott winning on the 28th bird. The **£150** Live Pigeon Open Match was also won with a Greener. The Championship of the Styx Club was again won with a Greener."

Halesworth, 6/5/24.

"You will be interested to know the original targets have been sent to Nobel's, as my previous average with 2¾ 5's has stood at 40 pellets; the jump to 56 was pretty considerable, and I wonder what gameshooters would think of 19 5's into the pheasant at 40 yards—40 yards taped to foot of shooter. A 6-round series with Eley's 2¾ trap cartridges, nitro quality Empire powder, 1¼ oz. No. 5 shot, right barrel of 2¾ case, Greener gun, 7×6 diagrams, area of pheasant.

W. W. Greener's Hammerless Guns.

Grade F25. **PRICE £26 5 0.**

DESCRIPTION.—This is the lowest-priced gun made with the "Facile Princeps" Lock mechanism, and meets the demand of those sportsmen who require a quick-lock mechanism, and at the same time a distinctive character in the gun itself. This type is so well distributed throughout the world and is so strikingly characteristic of our manufactures that it can be instantly distinguished, even at a distance by all Sportsmen, as the typical Greener Gun.

It should be noted that this mechanism is quicker in action than any other system, *i.e.*, less time is occupied in striking the cap after the trigger has been pulled. This is an important advantage in pigeon shooting, and is one of the points which go to make this type without equal for value among cheap hammerless guns. Neatly finished, yet handsome in appearance. A "real" gun, perfectly balanced, handling with the "just right" touch only found in guns with a well-known reputation.

It can be supplied in 12, 16 and 20-bores only, and will be built to normal specification without increase in price.

This gun, made with 28in. barrels, makes an ideal all-round weapon for Indian sportsmen. It can be used with spherical ball, with large shot for duck or small shot for quail. A suitable mould will be supplied at 10/6 extra

---

Nova Scotia, 23/3/03.

"My hammerless 12-bore I have used hard for 10 years, fired about 12,000 shots, and is a better gun than when I first bought it."

Sheffield, 25/6/24.

"I received gun safe. Thanks for quick delivery. It is a nice, plain gun and shoots well. I am sending you two patterns with the left barrel; one of them looks well when it is opened out. I only send two because there were a lot of wood pigeons started flying about, and two of them found the ground very quick, I may tell you, at about 30 yards."—T.S.

W. W. Greener's

Side Lock Hammerless Ejector Guns.

Grade L80. **PRICE £84 0 0.**

This type of gun is preferred by some sportsmen as an English game gun.

The system lends itself to the display of chaste ornament, and its general external lines are quite orthodox. The mechanism is more complicated than the " Facile Princeps," and owing to the position and weight of the locks the balance of the gun is usually very good. For normal weight guns, firing standard charges for sport in Great Britain, the model can hardly be improved upon, but where very light guns are required, or for use with heavy loads, a box lock system is to be preferred.

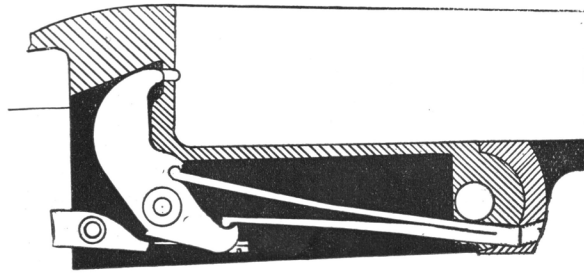
For guns of equal strength, the "Facile Princeps" system is a quarter of a pound lighter than a side lock 12-bore.

The gun, as illustrated, is fitted with " Wrought-steel " barrels, automatic ejecting mechanism, automatic top safety, 12-bore, 6½ to 7 lbs., or 16-bore, 6 lbs. to 6 lbs. 6 ozs., and stock measures to order. It has all the refinements called for by the discriminating user, and is handsomely engraved.

Grade L90. **PRICE £94 10 0.**

This grade is similar in design to the L80, but fitted with third bolt extension. It is an exceedingly handsome, well-finished gun, and will compare favourably with the " London " guns offered at higher prices.

W. W. Greener's "Empire" Gun.



LOCK MECHANISM OF THE GREENER "EMPIRE" GUN.

Invented by Mr. C. E. Greener in 1910—epitomises the chief features of Greener Guns through three generations, viz., strong shooting, solidity of construction and simplicity of mechanism—it was primarily designed for use in outlying portions of the Empire, where guns are an absolute necessity ; and the success of a trip, the constant supply of food, and ofttimes the very life of the sportsman depend upon the reliability of the gun. The patented lock mechanism gives the maximum of efficiency with the minimum of friction and wear. By a mechanical device in the testing department these locks have been cocked and discharged over 20,000 times in 24 hours with only one lubrication, without showing the least appreciable wearing away of the bent or abrasion of contact points. The illustrations of the gun indicate the long body, permitting the use of large barrel lumps or steels, and ensuring perfect rigidity under the heavy strain of large charges of powder and shot. The arrangement for cocking directly off the fore-end on to the main springs gives extreme simplicity and allows of that most desirable feature—a sound screwed joint pin to brace the action together and a broad solid joint to which the fore-end is suitably and efficiently held up.

The "Emplre" Gun has proved immensely popular with sportsmen in India and Australia, and many hundreds of these guns are sold annually in these countries alone. No better weapon is made at the price, and it is anticipated that the improved model illustrated will lead to a greatly increased demand.

Bathurst, 9/4/24.

" I have got a Greener gun ; it is a very old one, but it is a good one yet ; but the one I have now knocks it out as regards penetration and pattern. I might say it is perfect in balance, and everyone who has seen it takes a liking to it. I have shot ducks at 67 yards."—A.R.

W. W. Greener's Ejector Guns.

Grade EH25. **PRICE £26 5 0.**

DESCRIPTION.—Every sportsman dreams of the time when the birds come hurtling over the butts or the ducks come down to the blind in such a rapid stream that the ordinary method of " unloading " is a waste of opportunities. This is when one longs for the last refinement of the modern gun—the Automatic Ejector. The EH25 grade places such a gun within the reach of all sportsmen. It is the adaptation of the well-known and well-tried Empire Hammerless action to an improved system of the Forend Ejecting mechanism, combining the reliable ejection of the fired cartridge case with the perfect functioning of the Empire gun.

This gun looks " good " in that indefinable way which the true sportsman appreciates when he first handles a " good gun." It is well engraved and finished. Can be made to order in 12-bore only, with 28in., 30in. or 32in. barrels, in all weights from 6 lbs. 14 ozs.

It can be supplied with a Spherical Bullet Mould at an extra charge of 10/6, when it makes an ideal gun for all-round Indian sport.

Bullets of the Rotax or Lethal type can also be used with excellent results, providing that care be taken to see that such bullets are small enough to pass freely through the smaller or " choked " barrel.

Christchurch, N.Z., 16/7/24.

" Mr. Truscott divided a £10 sparrow match with the new gun, two of them killing all their birds and taking £5 each."—H.A.

Macclesfield, 1/1/24.

" I and a friend of mine were invited to a big, rough shoot last Saturday. I took my Greener gun—the only Greener in the company. I made some of the longest shots possible when the other guns had done their best. I may say my Empire gun has made history for killing so clean and crumpling up the birds at long range. It was very much admired. Its killing powers are unbeatable.

D.B.

W. W. Greener's Hammerless Guns.

Grade E20. **PRICE £21 0 0.**

DESCRIPTION.—There are many sportsmen who, while requiring a low-priced gun, yet feel that some decoration and minor refinements are essential, and this model will appeal particularly to their tastes.

It is handsome in appearance, the rather severe lines of the plainer quality being softened by the beautiful and artistic engraving, specially selected stock and superior finish, although the gun retains the essential features—strength and durability—of the cheaper grade.

This gun is built to order in 12-bore only, and can be supplied with 28in., 30in. and 32in. barrels, in weights ranging from $6\frac{3}{4}$ to $8\frac{1}{2}$ lbs.

A booklet fully describing the Empire Gun and illustrating the simplicity of its mechanism will be sent free on request

---

Victoria, 26/1/19.

"I have used this gun for nine years and have fired over 45,000 rounds. It appears to be a better gun than when I got it. It has never been tightened, and has cost me but 2/6 for a lever spring. Amongst other things, I won the Clay Bird Championship of Australia with it in 1916."

Woolwich, 13/5/24.

"Dear Sirs,—I think the following extract may be of interest to you, received from a gunner in Allahabad.

"I have just returned after a month's shoot at Markundi, near Mannikpur, C.P. One evening we were near a waterhole when we heard two panthers serenading each other. We sat up in a tree, and about 15 minutes later Jenks saw a panther, and hit it in the ribs with his Greener .310. The panther jumped down about 20ft. into a mullah. We waited, in the hope of seeing the other, but it was getting dark, so soon after decided to search for the first one. We found the blood trail, and almost immediately saw the panther under a bush. He gave her one from his rook rifle and I hit her with a bullet from my .310, which is also, as you know, a Greener. The panther cashed in after that, and we got her (it was a female) out of the thick jungle just before darkness set in. The measurement given was 5ft. 10in. nose to tail, after skin was pegged out.

"Both the .310 Greeners are very old and much battered weapons. The first shot smashed two ribs and the off shoulder, and would have proved fatal. I think this is a splendid example of the heights a small rifle when well made may rise to."—Sergt. C.R.W.

W. W. Greener's Hammerless Guns.

Grade E17. **PRICE £17 17 0.**

This is the original model " Empire " Gun introduced by W. W. Greener to meet the demand of Colonial sportsmen for a thoroughly reliable gun at a moderate price, capable of withstanding the rough usage to which the average Colonist's gun is subjected and free from the constant breakages so frequently associated with the so-called " cheap machine-made gun."

The Empire Gun was an instant success, and is now widely used throughout both hemispheres. During " the Great War " this type of gun was adopted by the British Air Force on account of the strength and simplicity of its mechanism. The body is of special design, permitting the use of long " steels " or barrel lumps, which ensure perfect rigidity or tightmess of the action under the strain of the heaviest charges of powder and shot. The lock mechanism is simple, consisting of but three pieces, which, in the case of a rare breakage, can be easily replaced.

This model competes in price with the mass production gun without possessing the abnormalities of that article. It works easily, balances perfectly and is a "good" gun in every sense of the word. Plainly, but well finished. Made in 12-bore only, with 30in. and 32in. barrels, half-pistol hand stock, weighs from 7 to 8 lbs., chambered for 2½in., 2¾in. or 3in. paper cartridges, choked to order, engine-turned rib.

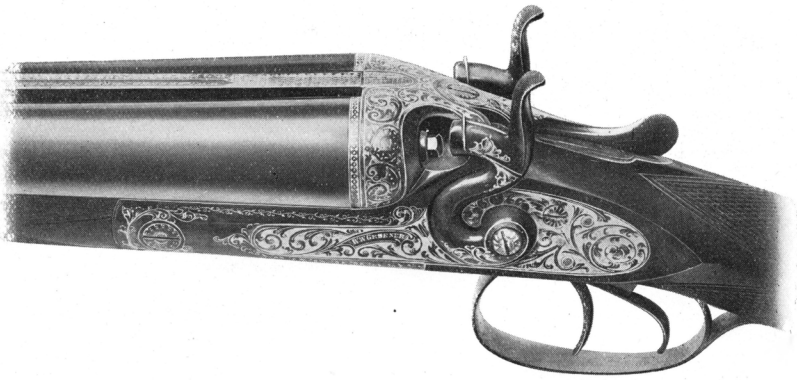
If any serious deviation is required from the standard model, the E20 grade should be ordered.

" I have not spent 6d. for repairs to your gun in eight years."—T.E., Canada.

Stamford, 14/6/24.

" I received the gun quite safely, and have tried it, and find it most satisfactory. It is a nicely-balanced, well-made gun. I am very pleased with it. I shall be very pleased to recommend your firm to my friends who may want a gun."—E.T.

W. W. Greener's Hammer Guns.



Grade A25. **PRICE £26 5 0.**

DESCRIPTION.—This is an entirely new model, originally introduced by W. W. Greener for the Brazilian market, where it has proved exceedingly popular. The special design of the action is particularly adapted to display the handsome heavy scroll engraving with which the gun is decorated. It is especially recommended for either pigeon shooting or wild-fowling. Fitted with the " Greener " Treble Wedge Fast Cross Bolt, best quality Steel Locks, Steel Barrels, straight or half-pistol hand stock, in all calibres from 12 to 28. Weight of 12-bore with 30in. barrels, $6\frac{3}{4}$ to $7\frac{1}{2}$ lbs.

TESTIMONIALS.

Westbury, Wilts, 12/8/24.

" The Empire gun I purchased from you last spring is giving every satisfaction. I am very pleased with it."—A.E.

Co. Derry, 29/8/22.

" I have two of your hammer guns : one was bought by my father, second-hand, 35 years ago it is still as good as new, and never was yet in a gunmaker's hands ; the other is a beautiful gun also, and a powerful killer."—W.K.D.

Godwan River, S.A.

" I am very pleased to tell you that the shot gun you made for me, while at Nelspruit, has been most satisfactory, being all that could be desired ; and if the rifle shoots as well as the one you made for A.G., I shall be lucky indeed."

Manawatu, N.Z.

" We have one of your guns in the family ; it is an old one. It is a beautiful gun to kill, and throws a splendid pattern."

Columbus, Ohio.

" I have one of your guns which I use at the trap, and have shot it with success at many important tournaments in this country. It is the best shooting gun I ever saw. I have a standing offer to shoot it for the best pattern with any gun that can be bought."

W. W. Greener's Hammer Guns.

Grade A16. **PRICE £16 16 0.**

DESCRIPTION.—In spite of the constant reduction in the price of the Hammerless gun, there are still some sportsmen who prefer the gun with the external hammers; and while not content with the cheap trade-made article, require a good gun at a reasonable price. This model will meet the demands of both Indian and South African sportsmen. It is quite plainly finished, fitted with good quality Steel Bar Locks, "Greener" Cross Bolt, "Greener" Fore-end Catch, low hammers, steel barrels. Made in 12 and 16-bores only, choke-bored to order, and in standard weights, with straight or pistol hand stock.

Philadelphia, U.S.A., 8/7/24.

"I am in receipt of your kind letter and also the parts. It is indeed a great satisfaction to deal with a firm that gives so much individual attention to the users of its products."—E.A.

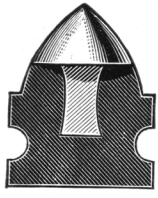
Ames, Ja., U.S.A., 7/10/22.

"It makes me feel good to see a real gun catalogue . . . We used to use the 'Far Killer' in Canada for Ducks; no need to lead, just let her go . . . Saw the Greener Exhibit at Chicago in '93, enough said. When better guns are made, Greener will make them."—T.J.S.

Henderson, Ky., U.S.A., 11/9/22.

"I own a 10 gauge Greener Duck Gun, No. 25684, which is without a doubt the finest gun I have ever used, and only a few days ago I killed a dove at 75 measured yards. I cannot say too much in praise of your great gun."—T.M.

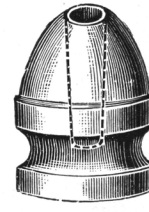
W. W. Greener's Choke-bore Rifles.



STEEL-POINTED BULLET.

Grade OF40.

PRICE £42 0 0.



HOLLOW BULLET.

W. W. Greener's "Facile Princeps" Hammerless Action, with Treble Wedge Fast Cross Bolt, Wrought-steel Barrels, 28in. or 30in. long. Sights consist of Flush Folding Leaves, sighted for 100 or 150 yards. Half-pistol or straight hand stock, neatly finished and engraved, as illustration. Made only in 12-bore. Weight 7½ to 8½ lbs., according to load used. Recoil same as shot gun. Each rifle is sent out complete with spherical and conical moulds.

Grade OFH60. PRICE £63 0 0.

Similar to above, but fitted with "Greener" Automatic Fore-end Ejecting mechanism. The "Choke-bore Rifle" is undoubtedly the best weapon of its class. It is bored on an entirely different principle from any other of these double-purpose weapons, and gives more satisfactory results when used with shot. When used with ball it is an excellent weapon for "snap-shots" at large game or deer drives; also tiger and bear shooting, or whenever advantage has to be taken of a "snap-shot" at driven or moving game. It is essentially the weapon for jungle work, for with the accuracy and force of the heavy rifle, it combines the lightness and handiness of the shot gun. Firing black powder and a conical bullet at 100 yards, diagrams measuring 4 × 3in. can be readily obtained. **Suitable smokeless powder can also be used with satisfactory results,** provided the ammunition is loaded by the maker. Muzzle velocity varies from 1,050 to 1,200 feet-seconds with striking energy at 100 yards, of 1,722 feet-lbs. to 1,822 feet-lbs., according to load and bullet used.

Also made in 10, 16 and 20 bores.

Price of Ammunition for above—see page 32.

Leydenburg.

"It performed very well, putting all its bullets in a 6in. diameter bull. I am much pleased with the weapon, and shall take it with me to Somaliland."—H.T.G.

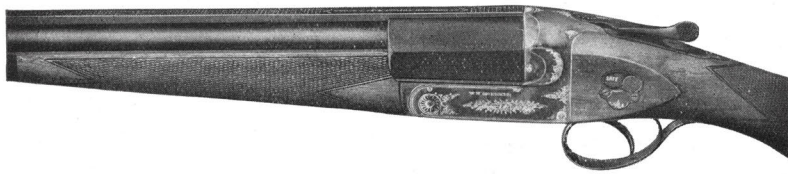
W. W. Greener's Single Barrel Shot Guns.

Grade FHS40. **PRICE £42 0 0.**

SINGLE BARREL TRAP GUN.

DESCRIPTION.—Greener Guns are world-famed for close shooting, and special attention is paid to this essential feature of the perfect Trap gun. It is well balanced, fitted with long full fore-end, completely protecting the hand, high broad and flat ventilated rib, mounted on solid steel studs, admitting of free passage of air between rib and barrel and eliminating "mirage." This model is made in 12-bore only, chambered for 2½in. or 2¾in. shells, 30in. or 32in. barrel, Hammerless, with Automatic Ejector, "Greener" Cross Bolt, the strongest form of breech fastening extant, "Greener" Side Safety, handsomely engraved and finished. *Built to order.*

View of Breech Action showing Flat Top Rib of the Grade FHS40 Gun.



Grade DS30. **PRICE £31 10 0.**

A well-made single barrel Hammerless gun, non-ejector, 12-bore, with 30in or 32in. barrel, top lever, Greener cross bolt, flat rib, neatly engraved. Built to order. Weight 6¾ lbs.

Grade DS25. **PRICE £26 5 0.**

Plainer quality, Top Lever double bolt. Weight 6½ lbs.

W. W. Greener's Single Barrel Guns.

The GREENER GAFFER GUN.—This is an entirely new model introduced by W. W. Greener for the use of farmers, trappers and others requiring a sound British-made gun at a low price. It is interchangeable, and new parts can be replaced cheaply at any time. It is not a converted weapon and possesses several patented features unobtainable in any other model.

Hammerless Automatic Ejector, with automatic safety, full choked or bored to order, fitted with sling swivels.

Descriptive booklet of these guns post free on request.

No. 1. No. 2. No. 3.

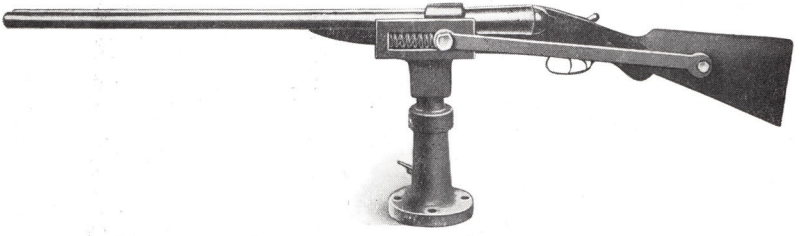
No. 1 Model, 12-bore only, with 26in. barrel, $6\frac{3}{4}$ to 7 lbs. **£4 4 0**

No. 2 Model, 12 or 16-bore, with 26in., 30in. or 32in. barrel, chequered hand and fore-end, chambered for $2\frac{3}{4}$in. case, weight $6\frac{3}{4}$ to $7\frac{1}{4}$ lbs. **£5 5 0**

No. 3 Trap Shot Model, 12-bore, with 30in or 32in. barrel, flat top rib specially bored for close shooting. An ideal gun for trap shooting. Weight $7\frac{1}{4}$ to 8 lbs. **£9 9 0**

No. 3 can be made with detachable barrel, £2 2 0 extra.

W. W. Greener's
Combined Punt and Shoulder Gun.



Amateur punt-gunners have long felt the need of a lighter pattern stanchion gun than the heavy, cumbersome, cannon-like weapons which are very generally used on the fowling stations round our coasts—a gun which, upon an opportunity occurring for a pull into a bunch of high-flying fowl, could be quickly unshipped from its stand or crutch and fired from the shoulder. The illustration shows the gun in question mounted on its recoil box, and from this it will be noticed that, in lieu of the old-fashioned breeching ropes, the gun is fitted with a spring and steel rods fastened by a pivot passing through the stock. Not only is this far less clumsy in every way than the rope recoil tackle, but it is equally efficacious, and a very great improvement on the older pattern stands. The gun is hammerless, weighs 25 lbs., length of barrels 36in., and fires a charge of 10 drams of powder and 4 ozs. of shot. When mounted on the fore-deck or a specially prepared platform, as the case may be, of a punt or a boat, the gun can be trained in any lateral direction and elevated to take fowl on the wing. This gun can be made so that the patterns will superimpose—thus, if both barrels be fired simultaneously, patterns of 105 pellets will be made in a 60in. circle at 100 yards, firing 12 drams of black powder and 4 ozs. of No. 1 shot.

Price, complete with recoil stand, as illustrated **£150 0 0**

,, ...	.410	27	$2\frac{1}{4}$	$\frac{3}{4}$	$\frac{5}{16}$	$3\frac{3}{4}$ to 4

* Shot of No. 4 size or larger. † Shot of 7 or 8 size or larger.
‡ Or equivalent nitro powder.

Ball may be safely used from guns of above weights, provided the bullet can be pushed through the choke or narrowest part of the barrel; but when the gun is intended for regular use with ball, a few ounces extra weight in the barrel is advisable.

N.B.—No brass cases are now available for any bore over 12, *and consequently the larger bores are only bored for paper cartridges.*

The above loads are approximate to the weights of guns given, but must be read with allowance for size of shot and available cartridge space, *e.g.* it would be possible to load $3\frac{1}{2}$ ozs. of small shot, say No. 4, into a 4-bore paper case, but $3\frac{1}{2}$ ozs. of AAA would not leave room for 10 drams of powder and sufficient wadding; again, with the 3in. chamber 12-bore gun, $1\frac{5}{8}$ oz. of large shot, say No. 2, may be effectively loaded, whereas $1\frac{5}{8}$ oz. of No. 6 would run up pressures unduly, especially with an equivalent charge of nitro powder.

TESTIMONIALS.

There is no more convincing testimony to the value of a gun than the personal enthusiasm of its user—and it is doubtful if any gunmakers' correspondence covers a wider area than W. W. Greener's. From every corner of the globe and by every mail, sportsmen write expressing their appreciation of Greener guns. It would be impossible to reproduce even a hundredth part of such correspondence, and the extracts given hereunder merely indicate the wide field covered by such testimonials. We recognise that a satisfied customer is our finest advertisement, and so we endeavour to make all Greener guns so good that the purchaser will be the potential writer of our next testimonial.

Central Provinces, 8/6/24.

" I have a Greener gun which has been at least 40 years in the family, and many prizes have been won with her, so for the service rendered I will put her in a glass case as an ornament—she is well worth it."—W.B.A.G.

Bath, 5/6/24.

" I was measured for the old shooting iron in 1875, and, considering that I have fired some thousands of cartridges, it has lasted me well."—Dr. E.T.

Gozo, 2/6/24.

" We should like to show you a pair of guns, one of which has been in our possession over 18 years, and which has fired over 100,000 cartridges at clay pigeons, and has been in constant use in all weathers, including the rains of Bohemia. It is still as good as ever, and will last for another generation."—Dr. M.A.X.

Hailsworth, 1/4/24.

" This is the finest shooting gun I have seen tested, and the footsquare hasn't a dog's chance against it."—F.H.B.

Niederbayern, 20/7/24.

" I have used your .450 calibre rifle for 10 years in Africa, and have shot about 70 elephants and 50 buffaloes and rhinoseri with it."—H.C.M.

Santos, 22/3/24.

" I tried the 28-bore on small birds, and was gratified to kill nearly all shot at. What pleased me most was one shot at a wild pig at about 13 yards with BBB. It dropped a yard after being hit, and died in less than a minute." —H.G.B.

Pinehurst, U.S.A., 21/3/24.

" You don't have to tell me anything about your guns ; I have owned six or eight of them the last 30 years, and never had one fail me."—P.W.

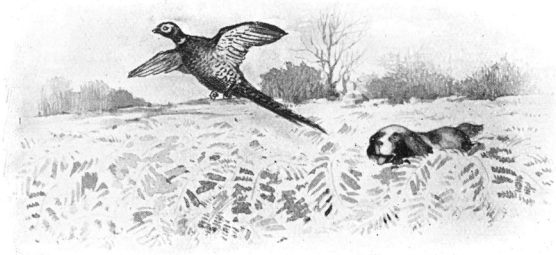
Transvaal, 10/3/24.

" I shall not start until I get my W.W.G. Mascot back, for my equipment is never complete without it."—C.G.

Honours won with the Greener Gun.

The great London "Field" Trial Cup was presented to W. W. Greener by the proprietors of the London "Field" Newspaper in 1875 as winner of Class 1 for 8 and 10 bores, Class 2 for 12 bores, beating 33 competitors and 68 guns by all the best London and Provincial Gunmakers, Class 4 for 20 bores.

Since the First International Exhibition in 1851, when W. Greener was awarded a Special Prize Medal for guns and barrels perfectly finished and bored, until the last of the Great International Exhibitions in Turin in 1911, where W. W. Greener secured the Grand Prix, Greener Guns have been exhibited at the principal Exhibitions throughout the world and have secured Premier honours wherever shown. The world's most valued prizes in Live Bird Matches have been won by users of Greener Guns—the Grand Prix De Monaco, the most keenly contested event in the world, has been won again and again. The Triennial Universal Championship won three times—The Sportsman Championship of the World Challenge Cup—The Purdey Cup—in the great match, Choke Bores *v.* Cylinders. All the World's Records at Live Birds were made with Greener Guns. The greatest event in history, the American Field Champion wing shot Cup, being won ten times successively in 1890, '91 and '92, by J. A. R. Elliott. The list of cups and medals is too lengthy for enumeration but they are conclusive proof that the Greener Gun stands unrivalled.



SPORTING ACCESSORIES.

The number and variety of articles under this heading with which the sportsman may equip himself are legion. A few of the most essential are described and illustrated, and we shall at all times be pleased to quote for any sporting requirements. Many other accessories are included in Catalogue No. 52.

Novelties are constantly evolved as the result of the sportsman's practical experience, and we shall be glad to consider any suggestion likely to be of service to " the world of sport."

A good gun-case or cover and necessary cleaning tackle are a *sine qua non.* Any gun that is worthy of the name is worth taking care of, although there are many sportsmen who fail in the observance of the rule that " cleanliness and care add long years to the life of any firearm."

For ease of reference the accessories are arranged in alphabetical order.

Please quote list number of the article required when ordering.

AMMUNITION.

SHOT-GUN CARTRIDGES.

Greener "Sporting Life" serves as the standard for the best hand-loaded cartridges. The case is metal-lined with ⅝in. brass reinforcement. It is composed of all British-made material, which is tested before and after loading by the latest scientific instruments. The cases are specially made, the wadding gauged, the powder and shot tested, and selected for pattern, pressure and velocity, while the loading is done by carefully trained operators. The powder charge is weighed and the shot actually counted into each cartridge, thus ensuring absolute regularity.

Any standard selected powder or load can be supplied to order.

" Sporting Life" 12-bore 2½in. Cartridge	per 100	**19/6**
2¾in. ,, ...	,,	**23/6**
3in. ,, ...	,,	**27/6**
" Deadshot," second quality, metal-lined case	,,	**17/6**
" Paragon," cheapest quality, unlined case	,,	**14/-**

These cartridges are hand-loaded in British-made cases. The prices are net and for cash with order. Packing and carriage is extra, but carriage is paid on 1,000 cartridges in England.

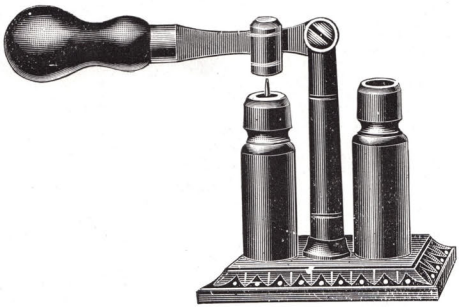
CARTRIDGE LOADING IMPLEMENTS.

Few sportsmen except those in foreign countries, remote from gun shops, reload their own cartridges. Such implements are, of course, useful on an extended expedition, and the following are the most generally used :

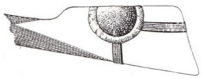
LCO22.	Turnover, plain japanned	**9/-**
L1022.	,, hardened lever	**11/3**
LO87.	Re and De-capper, pillar and block, polished brass	**8/3**
LC1153.	,, ,, stand pattern, brass	**11/6**
LC1200.	Loading Tube, polished brass, with wood rammer and block ...	**4/6**
LC1029.	Powder Measure, stained black handle	**2/6**
LC1030.	Shot Measure, stained black handle	**2/6**



No. **L.C. 1153.**

Complete sets of Reloading Implements can be supplied at the following prices : L4, **21/-** ; L5, **42/-**.

The above prices are for the standard 12-bore cartridge.



CHEEK PADS.

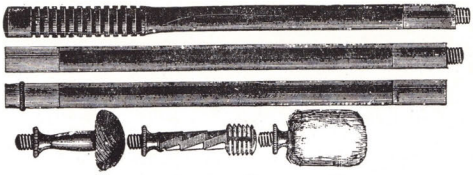
This simple pad is held in position on the stock by means of elastic bands, and prevents bruising of the cheek.

WG28.	—3in. diameter	**7/6**
WG29.	—Larger pattern, leather covered	**10/6**

A NEW CARTRIDGE BAG.

The recent Culford "accident" suggests the necessity for a "safety" cartridge bag. This has been provided by the new model designed by Mr. W. R. Oliver (the manager of W. W. Greener's London Depôt). The cartridges are carried in "tiers," and are instantly exposed for loading by the simple movement of a strap. Accidental discharge is an impossibility, and ample protection is afforded against wet. The bag is made in various sizes and qualities, ranging in price from **25/-** to **70/-** for a best quality pigskin bag, to hold 30 cartridges.

CLEANING IMPLEMENTS.

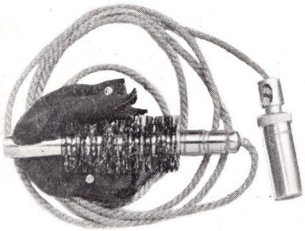


3-piece Jointed Cleaning Rod.

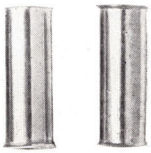
Whistle Extractor.

Chamber Cleaner.

Turn-screw.



Pocket Cleaner.



Snap Caps.

All the implements required for cleaning a gun are included in the following sets. The tools may be purchased separately, if required. The prices are for 12 or smaller bores.

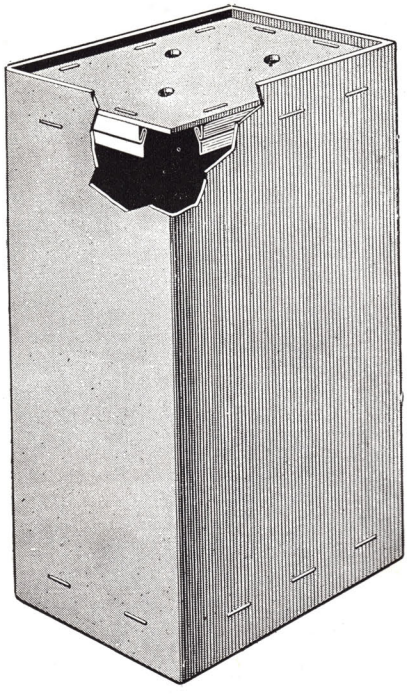
WG10.—The "Marwood" Game Stick; will carry 10 partridges or grouse, **3/9**

WG11.—The "Collapsible" All-metal Carrier; 3¼in. long, 4 oz. weight, will carry 12 birds **8/6**

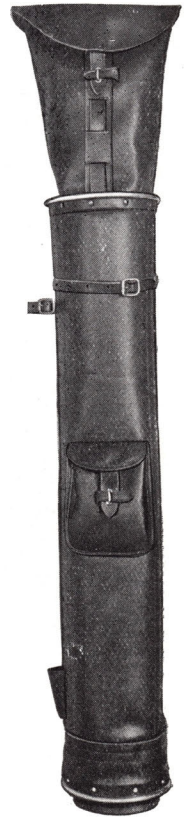


"LOCKTITE" GAME BOX.

An entirely novel box of strong leather board, fitted with metal angle-plates, strengthening and securely locking box. Pilfering and loss impossible.

	per dozen.
Brace of partridge or grouse	**5/-**
,, pheasants ...	**5/6**

Postage 6d. per dozen.

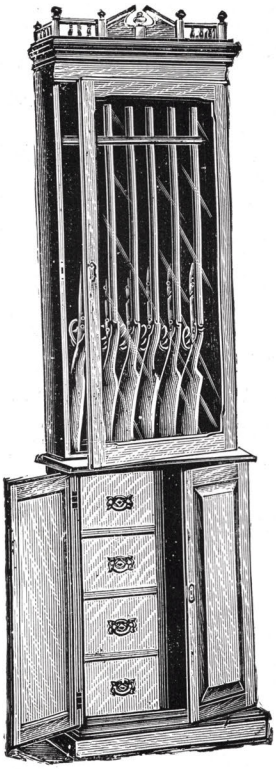


GOLF CLUB CARRIERS.

The "Vardon" Golf Bag is well known on account of the Patent Aluminium Bottom and Top Ring. The bag is lighter in weight than an ordinary bag; it is impervious to rust; damp takes no effect on the bottom, and there is no iron ring at the top to burst through and rub the clubs.

Made in the following materials—Slate, Khaki or White Duck, Bedford Cord, Beaverteen, Drill, Tan Duck, Double Texture.

5in. diameter ring	**20/-**
5½in. ,, ,, ...	**23/-**
6in. ,, ,, with hood	**27/6**
7in. ,, ,, ,, ,,	**30/-**



WP99.

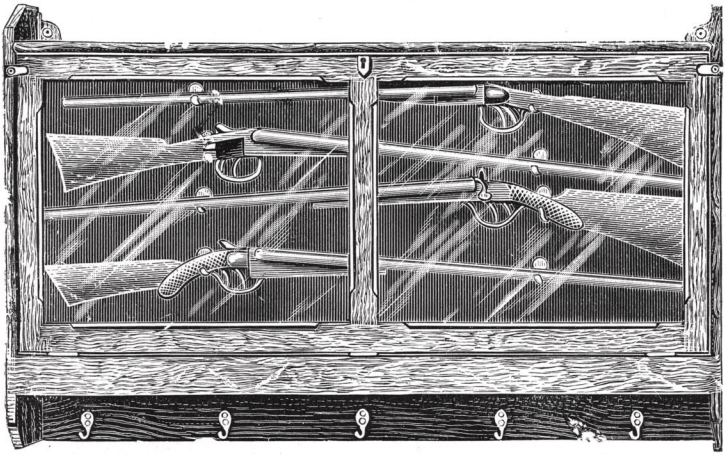
WP10.—Upright Gun Cabinet, to hold 4 guns ...	**£9**	**0**	**0**
WP85.—Upright Gun Cabinet, with drawer, to hold 4 guns	**£12**	**0**	**0**
WP99.—Gun Cabinet, with cupboard and drawers ...	**£30**	**0**	**0**

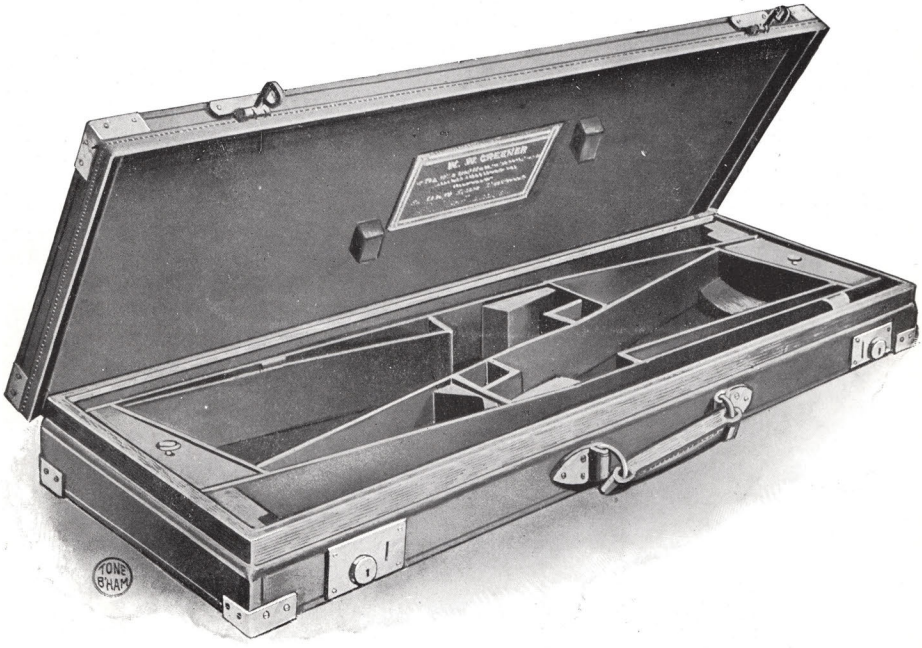


WP20.

GUN CASES.

The best are of oak, leather covered, but these are heavy. Solid leather cases, well stiffened, and with strong well-made frames, afford equally good protection, and, being much lighter, are generally preferred.

The pattern to be recommended is one in which the barrels and the stock lie on the same level; in any case, in which barrels are over the stock, injury may occur to the gun in transit. All gun cases are made of the finest selected leather and well-seasoned wood.



Best Case for Pair of Guns, with Spaces for Cleaning and Loading Implements.

	Gun Case only. To carry one gun.
No. 1.—Best oak case, covered with dark leather, lined green velvet and fitted with two spring locks ...	£10 10 0

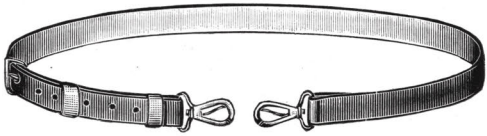
To hold 3 guns	**25/6**	per pair.
,, 4 ,, ...	**31/6**	,,
,, 6 ,, ...	**37/6**	,,

WG30.—All-brass, highly lacquered Gun Rack, to hold 3 guns; a handsome addition to the hall or gun room; guns can be securely locked in position **£3 10 0**

GUN SLINGS.

WG20.—GREENER'S GUN SLING. Made of best leather, with nickel-silvered fittings. This novel sling was originally designed for carrying the gun on horseback. The gun is slung across the chest, and is immediately ready for use, the simple pulling of a leather tab releasing the gun and enabling the shooter to bring it at once to the firing position. It is fastened to an eye in the butt only, and is sent out complete with gimlet and "eye" **15/-**

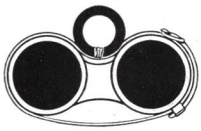
WG21.—POCKET GUN SLING. This is a neatly made leather strap, fitted with ingenious fastenings, which enable one to fix it readily to any gun. It is extremely useful for carrying the gun when one feels tired at the end of a long day. It only weighs 1½ oz., and may be carried in the vest pocket ... **3/6**



No. **B3a.**

B3a.—Plain leather Sling, 1in. wide, steel swivels **4/6**
B3b.—Better quality Sling, 1⅛in. strap **6/-**

GREENER'S "NOVISADE" (Novice Aid).



This is an easily fixed device, consisting of a rubber ring strapped to the gun barrels, and it will be found of considerable service to the tyro, in teaching correct and quick alignment; will fit any gun **4/6**

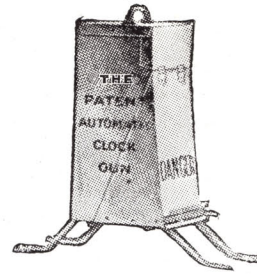
NOVELTIES FOR SPORTSMEN.

AUTOMATIC CLOCK ALARM GUN.

No. **C6050.**

This useful apparatus has been produced for the use of farmers and owners of orchards; it holds ten 16 bore cartridges and is adjusted to fire at intervals by means of an ingenious clockwork device **£7 10 0**

Cartridges .... **12/6** per 100



No. **C6050.**

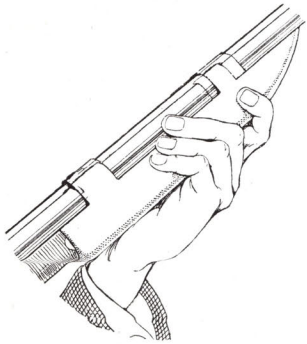
SHOOTING ANKLETS.

Brown Marl Canvas, double texture, waterproof, with plated buckles and straps as illustrated.

Sizes—10½″ to 12½″ **8/6** per pair.

Can also be supplied in Drab Canvas, Scotch tweed.

Hogskin ditto, Brass Buckles, **11/6** per pair.



COLLEY'S FOREND ELEVATOR.

This is a novel form of hand guard, slipping easily into position over the forend. The inventor's chief claim is that it causes the sportsman to shoot high and thus prevents the "tailing" of rocketing pheasants. No fixing is required. Price **30/-**

GREENER'S HUMANE CATTLE AND HORSE KILLERS.

No. **B1203.**

Although primarily designed for the use of butchers, a pocket model as illustrated is now made for Veterinary Surgeons, Kennelmen, etc., every estate owner should possess one of the Greener type of Killers. They kill Horses, Cattle, Sheep, Pigs, and Dogs, instantly, safely and humanely.

No. **B1203** **42/-**

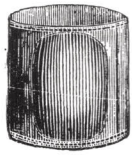
Other models .... **21/-** to **63/-**

Descriptive booklet post free.

GREENER NOVELTIES FOR SPORTSMEN.

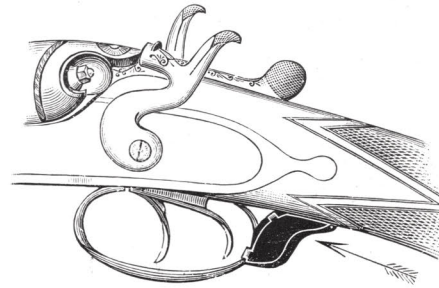
DANCER'S PATENT SADDLE BAR.—This deservedly popular Stirrup Bar has been made by us for many years. Automatically slips the stirrup strap in case of a fall; and although not advertised, it is still in constant demand. It is fitted by all first-class saddlers ... ... **21/-** per pair

FINGER GUARDS.—Nothing is more painful than the constant bruising of the finger against the trigger guard. The surest remedy is a sloping guard, as fitted to Greener guns, but an additional protection is afforded by a pneumatic rubber finger guard or pneumatic pad affixed to the guard.



WG30.

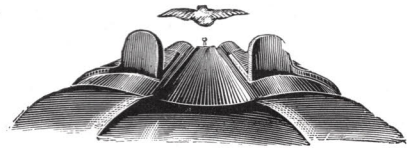
WG32.



WG32.

WG30.—All-rubber guard, pneumatic bulb, to slip on finger **1/-**
WG31.—Elastic and leather, with pneumatic pad, to slip on finger ... **2/-**
WG32.—Pneumatic rubber pad, easily fixed to rear of trigger guard ... **2/-**

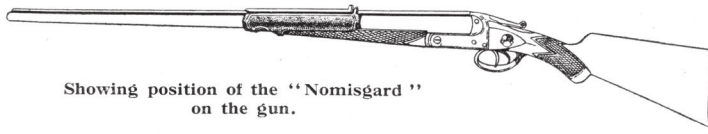
The GREENER "NOMISGARD."—A perfect handguard, sight aligner and barrel protector The hand comes to the same position on the barrel every



View of bird through "Nomisgard."

time, and is protected from the heat of rapid fire, or the cold in winter. It is made of hardened sheet steel, neatly covered in tan pigskin or black leather. Made to suit all calibres. No fitting required. **12/6**

Inland postage 6d. extra.



Showing position of the "Nomisgard" on the gun.

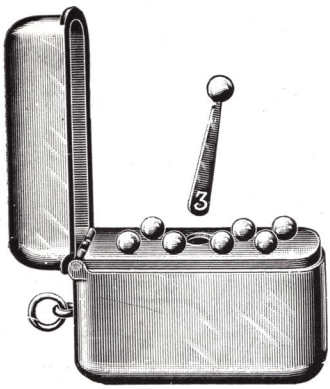
THE GREENER "OBLITERATOR."

The illustration very clearly shows the object of this device. It is a rubber shield, fitting over the thumb, blotting out the vision of the left eye. Very useful to sportsmen who experience difficulty in closing the left eye, when this is the master optic ... **3/6**

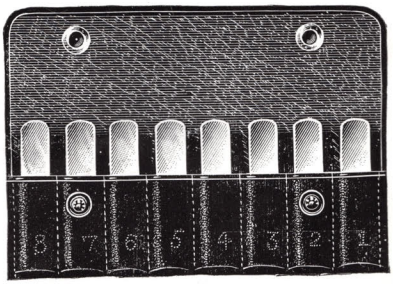
ENAMEL FORESIGHT.

This is a very handy article, consisting of a tubular sight with white enamel face. This slips over the ordinary shot-gun or rifle foresight, and is a considerable aid when using the weapon as a "ball gun" for jungle work or in the dusk **7/6**

POSITION FINDERS.



GPF3.



GPF2.

Used as a Pocket Lottery, to determine the position of the Shooters.

GPF3.—Best White Nickel Vest Pocket Case, nickel-silvered, with ring to attach to watch chain **12/6**

Can also be supplied in Gold or Silver Cases.

GFP2.—Best Leather Pouch, with eight numbers, ivory pegs **12/6**

SPORTSMEN'S SEATS.

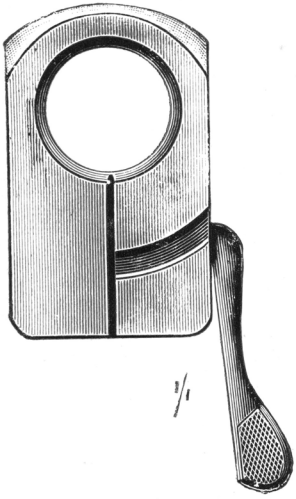
W. W. GREENER'S MINIATURE RIFLE.

The GREENER Miniature Rifle was specially designed to meet the demand for an absolutely accurate rifle for short range work—it achieved an instant success and became the paramount weapon of the Rifle Club movement, and is now widely used for Sporting purposes. (*See testimonial on page* 21.)

GRADE **MR5.** **£5 5 0**



Calibre.—Made in ·22, ·297/250, ·25, ·300 and ·310.

Breech Action.—Martini—simplest, safest and strongest extant. Detachable lockwork, the interior mechanism can be instantly removed for cleaning—no tools required.

Barrel.—26ins. long, detachable, one turn of thumb lever permits of barrel being dismounted; this greatly facilitates cleaning and carriage, and the fact that the world's record scores have been made with rifles of this type is conclusive proof that a detachable barrel, fitted with Greener's Vice Lock Grip, is in no way detrimental to the accuracy of the rifle.

Sights.—Sporting or Target, as required.

Weight.—6½ lbs. Eyes for Sling.

MR7.—Superior finish, engraved action, chequered stock and forend **£7 7 0**

Made in ·32/40 and ·300 Sherwood Calibres with "medium action" at **21/-** extra.

Complete Rifle Catalogue post free on application.

OLD ARMS.

Our world-wide connections place us in a position to both buy and sell "Antiques." Our museum is replete with beautiful and interesting specimens, many of which are for disposal, and we shall at all times be pleased to hear from sportsmen and collectors interested in the subject.

The following typical specimens are offered for sale subject to being unsold :

No. **687.**—One pair Duelling Pistols (percussion), with hair triggers, by Meredith, London, in mahogany case, octagonal barrel 9¼in., length overall 15in. Forend stock half-way up barrel, silver capped and with under rib. A nice pair of pistols, in good condition **£6 10 0**

No. **605.**—One pair Brass-mounted Flint Pistols, by Heylin, Cornhill, London, date about 1770, brass barrels slightly bell-mouthed, full stocks to end of barrels, length 12in. overall. A beautiful and rare pair ... **£10 10 0**

No. **606.**—One rare Queen Anne Flint Lock Pocket Pistol, by W. Hesler, cannon barrel and very unusual stock, with mask and serpentine screw plate on reverse side to lock **£5 0 0**

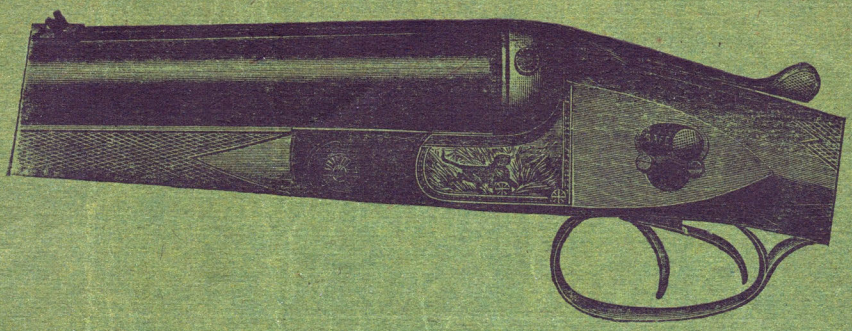
W. W. GREENER'S

"BIG GAME" RIFLES.



Grade RDT50 Price £52 10 0

Greener's "Big Game" Rifles have been famous since the days of Sir Samuel Baker, G. P. Sanderson, and other famous "hunters." They are produced under direct supervision of the Directors of the Firm, who have had extensive experience of Big Game Hunting in many lands.
